

How To Remove Tattoo Naturally

**YES, IT CAN BE DONE.
IN FACT IT'S BEEN AROUND A LONG TIME!**

How To Remove Tattoos Naturally

Yes, it can be done. In fact it's been around a LONG time!

Fellow tattooed friend,

I know what's on your mind.

And to answer your lingering question...

YES – there is a better way to remove your tattoos than by using concentrated lasers to burn away the problem.

Tattoo artist and remover Dorian Davis here. Like you, I love showing off the things I care about through my tattoos. I have couple full sleeves myself!

And if I had to give you a number of tattoos that I've put on and removed -- I've done about 5000 at this point? Give or take 1,000.

Here's the thing we're going to talk about in this brief guide: NATURAL removal methods.

Something I know deeply about; after all, **of the thousands of tattoos I've helped remove – exactly 0 of them were burned off using lasers!**

So how did I take them off? You're about to find out. In this guide you're going to learn:

- Why the conventional tattoo removal wisdom, that laser removal is the only option or the most effective – not only hurts your wallet – but also sometimes leaves you with **completely avoidable scars!**

- Then we'll talk about some all-natural approaches to skin ink removal that **have been used for thousands of years** with great success. (And there's absolutely no reason you can't use them yourself nowadays).

One out of three people regret their tattoos and want to get rid of them

That statistic comes from the British Dermatological Association. The numbers in the US are similar as well, which has turned the modern tattoo removal industry into the big, booming cash cow it is. The American Medical Association has been quite happy about this. They have gone on to train an army of MDs to capture what was traditionally a simple, naturally focused industry.

The rise of the laser

Picture yourself at a laser removal clinic. You decided to pull the trigger.

“*What will it be like?*” you silently wonder to yourself.

As you're sitting there in nervous anticipation, a concentrated beam of energy is targeted at the sub-skin ink that makes up your tattoo.

The medical professional does his best to hit your skin cells with the proper wavelength of light, to allow just the proper amount of penetration of the skin. Of course the laser has to be strong enough to break down the ink pigment as well.

All of this sounds well and good. And for many people who do laser treatments, this does work effectively. But there are two points I want to bring to your attention:

1. Laser tattoo removal almost never fully works in one session due to the nature of the procedure. Three or more sessions are common at a cost of \$200-\$500 each time.
2. It is extremely difficult to get the exact intensity right with the laser, even for a trained medical professional. Heat burns are common, as is scarring. Sometimes the damage fades away, other times it can be permanent.

That said, laser is still by far the most popular way for people to remove their tattoos.

Is it because laser removal is so much more effective than other methods out there?

Certainly not.

As you've already seen there are significant drawbacks to lasers. But laser tattoo removal has been big business for the American Medical Association and their Hollywood sized promotional budget. The unfortunate consequence is that many people continue to be trained to believe that laser removal is the only viable option with the unwanted tattoo.

The all-natural option

You may be surprised to know that all-natural tattoo removal is not only possible, but it has been used far before lasers were even invented.

In fact natural methods have been around since tattoos themselves!

Are they truly effective? Well, take a look for yourself.

Here's one person going through the process I'm about to describe:

Now this didn't happen overnight. Just like laser removal, the best results happen after a certain amount of time.

There's a huge difference between this method and laser though. This man had his medium/large arm tattoo removed for just a few dollars at home.

If he went to a clinic, I can tell you a tattoo of that size would've cost him about \$300 per session with a minimum of three sessions, most likely four. \$1,200, in other words.

That's not even considered expensive compared to a full sleeve or chest tattoo removal, which can be several thousand dollars! Crazy!

So you can see that all natural methods can both work and be a heck of a lot easier on your wallet.

How did this man remove that tattoo for only a few dollars?

Salabrasion is one of the techniques I use with my clients, and also teach to people looking to remove their tattoos at home without my direct involvement.

Salabrasion basically accelerates the skin's **natural** exfoliation process – that is the automatic removal of the top layers of the skin. By accelerating the process, we can go deeper down to where the tattoo ink is normally hidden away, and bring those ink layers up to the top where they are then rubbed away with a simple skin exfoliating mixture.

The downsides of a simple, home-based method

Salabrasion takes weeks, not days, for the tattoo to fully remove. So if you're in a hurry, you may need to try another technique.

But if you have a few weeks to fade and eventually eliminate your tattoo, this is one of the very best methods. It's cheap, pain-free, and can be done with ingredients found at the house or in the grocery store.

There are other techniques just as effective as Salabrasion, which I encourage people to also consider. They all have their strengths and weaknesses.

And I guarantee if you compare them to laser removal, they're all a heck of a lot cheaper and less painful!

If you'd like to learn more about Salabrasion and the other all-natural techniques, you might want to check out [“The Laserless Tattoo Removal Guide™”](#). It's the guide I put together as a 23 year tattoo artist and all-natural remover.

[The Laserless Tattoo Removal Guide™](#) goes into the following topics...

- What exactly we're trying to accomplish: The nature of skin and tattoo ink, and how the two fit together to create a semipermanent tattoo
- **How we can reverse that process using simple home and grocery store ingredients without the expense and pain of lasers**
- Why lasers sometimes produce bad results that people have to live with for life
- **Several different tattoo removal methods that each have their own strengths and weaknesses. Combined, these methods allow you to remove any type of tattoo no matter where it is on your body, for just a few dollars compared to expensive laser tattoo removal**

Here's what some of my previous clients had to say about "The Laserless Tattoo Removal Guide™":

*I loved having my boyfriend's name on my sleeve when I was still with him, but after the relationship broke up (and especially considering how it broke apart) I absolutely hated having my skin marred with him. Unfortunately, with a mortgage and two young angels to look after, I just did not have the money for laser. Thankfully, I learnt about you from a facebook group where a number of people were talking about the great results you had with them, and today I'm sending you this email with tears of joy in my eyes. **His name is gone from my skin, and now I can forget about him completely.** From tomorrow, I will truly move on and start the next chapter of my life, thank you Dorian.*

*Jinny Grosch,
Berlin, Germany*

*I was pretty wild in my late teens, and had gotten a not-so-small tatt on my side and up to my neck. Now in my mid thirties and with twin 1 year old daughters, I sort off wanted a more 'plain' image and hence wanted to at least remove the part of the tattoo on my neck. A friend suggested your method, so got started a few weeks ago (not sure if you remember me from my initial email). I just wanted to let you know that I'm really happy with the progress and the tattoo is almost **gone completely and with zero side effects as you had promised.** Thank you!*

*Jack Glass,
Texas, USA*

*Dorian, I can't believe how fast your system works! At this rate my tattoo will be gone completely by the end of this month, and I have had no irritation or anything on my skin. A friend of mine was going to go for laser removal but **has now cancelled her appointment after seeing my results and will be purchasing your guide too as I obviously recommended it.** Your book is worth its weight in gold.*

*Yui Sato,
Tokyo, Japan*
